

# Organic Chemistry Study Plan for the A Student

Completed

## Mini-Movies

1) [The mini-movies](#) to look into the topics you might want some clarification on, these are in-depth 10-25 minute movies on specific topics and reaction sequences.

## Practice Exams

2) Then go nuts on the [practice exams](#). You want the difficult ones for sure. Once you have taken a few of these, figure out where your weak spots are and go to

## Tutorials

3) The [tutorial bank](#) to look for PDF tutorials on the subjects you were a little weak on.

## E-Books

4) After that, download [the e-books](#) ("86 Tricks to Ace Organic Chem" and "Organic Chemistry Mechanisms with EASE") and read them both. They are both relatively short reads and give you some really nice tricks for how to solve problems you have never seen before.

## Spiderwebs

5) Next, we suggest creating your own spiderweb of reactions. For an example of one, click [Organic Chemistry Spiderweb](#). Since you are really good at this, your web should have at least 40 reactions. If you can make the entire 40 reaction web without having to look in your textbook or on the internet, you are doing great.

## Videos

6) Last, just before finals, go through our [course review videos for the semester](#). It will only take 6-7 hours and will really give you a good summary of the entire semester. We would also recommend the [Organic Chemistry Mechanisms with EASE video course](#), if you didn't get to the book.

AceOrganicChem.com *Elite*

You can't fight organic chemistry, but you can ace it.
